

Precise, Error-free Mouse Control

SmoothPoint™ is an innovative software application that allows you to take full control of your mouse or pointing device. Advanced algorithms use linear and nonlinear physics equations to remove the effects of tremor, uneven control, and overshoot, giving you ultra-smooth, ultra-stable pointing and drawing.

Point and Click like a Pro

Even with movement disorders, coordination difficulties, or difficult-to-use pointing devices, SmoothPoint restores the ability to fine-tune your mouse motions. It also improves mouse clicking by filtering for reduced inadvertent clicks, or alternately provides advanced Voice Clicking mode to completely avoid the need to press mouse buttons.

Superb Versatility

Works with a large variety of hardware devices and software: standard mouse, trackball, touch pad, head tracker, joystick, or switch controls. More than 10 control settings to fine-tune the mouse motion and clicking to match to your needs.

Highlights

Makes controlling the mouse easier

Makes clicking easier - even provides hands-free options

System Requirements:

- *Windows 7,8, or 10*
- *2 GHz Processor, 1 GB RAM, 20 MB hard disk space*
- *wired or wireless mouse or pointing device*
